Art Unit: 1636

Applicant's election with traverse of Group I, claims 51-78, in the reply filed on 13 November 2006 is acknowledged. The traversal is on the ground(s) that there would be no burden to search both invention, as they are both classified in 435/69.1. This is not found persuasive because this subclass is extremely large and of a general nature. As such, it does not represent a narrow search.

The requirement is still deemed proper and is therefore made FINAL.

Claims 79-82 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 13 November 2006.

Claims 53-57 and 60 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 51, 52, 59 and 61-78 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which

Art Unit: 1636

was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification sets forth SEQ ID NO:48. However, the instant claims are drawn to a nucleic acid sequence that hybridizes to SEQ ID NO:48 or its complementary strand, or functional nucleic acids with 90% identity thereto, or a functional fragment thereof, or vector, cells, hosts or methods which make use thereof. However, neither the specification nor the prior art teaches which region or regions of the transcriptional activator polypeptide are required for function, and there are no theories or formulae in the prior art that would have permitted one of skill to have known a priori which embodiments found within the structural limitations of the claims would have retained the specified activity. In the absence of such a structure-function relationship, one of skill would not have recognized that Applicants were in possession of the full scope of the claimed invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 58 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It appears that a verb, e.g., "consists" at the end of the first line, is missing from the claim. As such, the metes and bounds of the claim cannot be determined.
